# Open Actions

## Collaborate with this chain of green actions and help improve the planet

Now you can report environmental problems and propose actions that need community support to solve them.

[NEW REPORT](#)

### How it's Work?

GreenChain is a platform that uses the three principles of sustainability: social, environmental and economic, using the resources that web 3.0 offers. Our goal is to make the planet a better place for everyone.

#### REPORT

Bring attention to an environmental cause creating a report

#### TASK

Propose tasks to help in a given cause

#### COMMUNITY

Join or fund a task

#### PAYMENTS

Tasks done will have their funds shared among members.

- All transactions are recorded on the **blockchain** ensuring complete security for the community.
- All transactions are made in **USDT** in your registered.
- If a task is not executed as intended, all supporters will have their **money refunded**, and the action is canceled.

## Accumulation of garbage in an inappropriate place

São Paulo – Campinas

Reported on 20/10/2022

...

**Description**

One of the main environmental issues of the contemporary era is, without a doubt, the enormous amount of waste produced on the planet. Associated with this, another even more challenging problem arises: the non-appropriate reuse of these materials due to rampant consumption, waste and incorrect disposal of garbage.

## New Task

### About

#### Title

Say what you intend to do in a nutshell.

#### Does your activity comply with the laws?

No  Yes

#### Team size (including you)

10  20 members

#### Requirements

Required behaviours, clothing, materials, items or equipment must be described here.

#### Task Details

Try to make a complete description of the activities that will be carried out, for example, If you have chosen a team, specify the team's assignments, important locations, mode of transport of the material, etc...

#### Orientation (Optional)

Use this space for additional guidelines, such as tips, alerts, or recommendations.

### Deadlines

#### Estimated time in days to complete your task

1  10 days

#### Choose an end date for your project to expire

- Projects will be expired at 12:00PM and cannot be started after this date

10/30/22

### Values

#### How much USDT in total your team request to do this task?

\$ 2.000

# Name Server (IPNS)

## Purpose

IPFS works with file storage in a different way than the traditional way (Location based Addressing), using **CIDs** to identify the content, this makes it possible for these files to work in a decentralized way, however, it can be a little difficult to find and link these files in more complex applications, the purpose of **IPFS Tree** is to combine the ease of working with (Location based Addressing) with the advantage of having decentralized data.

## How is a node added?

In this case, to send the content to the tree the file is uploaded in *JSON* format to **IPFS**. This process will return a **CID** which must be added to a parent node sequentially until the root is reached, so whenever a **CID** is added or changed, the **CID** of the parents will also be changed.

## How is content localized?

To retrieve content in the tree it is necessary to access it through its path, for example:

“NameServer/1/0”

In this way, by retrieving the **CID** of the parent through **IPNS**, it will be possible to find the desired content and even browse among the children.
